

IN2033: Peer review of Requirements and High-Level Design Document

Review conducted by Team: 32

Review conducted on the document submitted by Team: 33 Review

Completed on: 08/03/2026

Review submitted for assessment on: 08/03/2026

Review goals:

- G1: Completeness
 - o G1.1 Completeness of Requirements
The requirements are complete, covering core IPOS-PU functionality. However, the prioritisation table lists 46 use cases but only 42 are ranked.
 - o G1.2: Completeness of High-Level Design
The high-level design is mostly complete with a component and class diagram present. However, an additional OnlineOrderAPI interface appears in the component diagram with no accompanying note or justification explaining its inclusion.
 - o G1.3: Completeness of Testing Plan
A testing plan is present and covers the main interface methods. Completeness is undermined by a data type inconsistency.
- G2: Correctness
 - o G2.1 Completeness of Requirements
Requirements are generally correct but contain notable errors including a duplicate use case , naming inconsistencies in the prioritised list, and an incomplete postcondition sentence.
 - o G2.2: Completeness of High-Level Design
The additional OnlineOrderAPI interface is inconsistent with the agreed group architecture, risking inter-subsystem incompatibility with Teams 31 and 32 whose designs do not account for it.
 - o G2.3: Completeness of Testing Plan
The PaymentAPI "amount" parameter is defined as int in the class diagram but tested as double, which is a direct inconsistency that would produce incorrect results when tested against the implementation.
- G3: Quality of the document
The document is well structured, formally written, and easy to navigate with a clear contents page and appropriate diagrams.

Review Log

Document:	PeerReviewTeam32In2033_2026 v1
Version:	1
# of issues:	10
Review Date:	05/03/2026

Attendees	Read Document (Y/N)	Time spent preparing
Zaina Meraj (Project Manager /Programmer)	Y	30 Minutes
Yaseen Barlas (Vice Project Manager /Analyst)	Y	30 Minutes
Sukhmanvir Atwal (System Analyst/Programmer)	Y	30 Minutes
Jagdish Vaghela (Designer / Programmer)	Y	45Minutes
Viktor Vasilchin (System Analyst / Designer)	Y	30 Minutes
Rizwan Hussien (Designer / Tester)	Y	30 Minutes

Leo Haghighi (Designer / Tester)	Y	30 Minutes
----------------------------------	---	------------

Issue No.	Section/page	Identified by	Issue	Fix
1	Requirements /p.34-36	Yaseen	Inconsistency between use case specs and rankings.	46 Use cases but only 42 rankings. Would be better to name the rankings by the use case spec ids.
2	Requirements /p.5	Yaseen	No Differentiation between Commercial and Non-Commercial member in use case diagram	Add associations that show what a Commercial member can do opposed to a non-commercial member. Same with Guest User.
3	High Level Design /p. 38	Jagdish	No note explaining additional OnlineOrderAPI in component or class diagram.	Add a comment/note which explains the extra addition of the onlineOrderAPI interface and why it may be needed.
4	Testing /p.43	Viktor	sendEmail API has a parameter "to"	Change to "recipient" or "email" because "to" is unclear.
5	Design Diagram Testing /p.38,p.45	Viktor	Inconsistency from PaymentAPI parameter "amount" data type between class diagram and test table	It is int in the class diagram but double in the test table. This will cause an error if the price of an item contains a decimal part, better to be double instead of int.
6	Use-case Specification /p.29	Rizwan	Use case ID "P08" repeated for use cases "IncreaseLinkCounter" and "IncreaseProductCounter"	Change the use case ID for "IncreaseProductCounter" from "P08" to "P09"
7	Use Case Specifications / p.25	Leo	Incomplete sentence in Postconditions "Promotion campaign created or updated & d".	Complete sentence to "Promotion campaign is created or updated & duration and discount rules are applied successfully."
8	Requirements / p.36	Leo	"TrackOrder" appears in the prioritisation table but no use-case specification exists earlier in the document.	Either create a TrackOrder use case specification or replace it with ViewStatus if that was intended.

Deliverable quality assessment

Criterion	Rank	Justification
Appropriate title, page numbering, version control	Good	Title is appropriate, document is paged and version is shown in a document history header.
Introduction, and Purpose and Scope	Good	It has a clear structure, correctly defines the purpose and scope of the subsystem, identifies the intended audience, and distinguishes IPOS-PU from the other subsystems.
Use of language appropriate to audience, and Spelling C Grammar	Good	Tone used throughout this deliverable is formal and expresses clearly to the audience.

Clear layout and structure	Good	Document is laid out clear and contents page indicate clearly where everything is.
Use of Graphics	Good	Use Case diagram resolution is a bit unclear but other diagrams are good and legible along with comments.
